

## Mathography

### Directions:

Write a letter to me about yourself. The letter will help me get to know you as an individual. The letter should address three general topics: you, you as a student, and you as a math student.

### Suggested Prompts:

*You:* Introduce yourself, using the name you like to be called. Describe your hobbies, talents, and interests. State your goals or dreams. What are you proud of? What else would you like to share?

*You as a student:* Describe the importance of school in your life. Describe yourself as a student (be honest, I am going to find out anyway). In what classroom activities do you excel? What kinds of activities do you find frustrating? Which subjects are your favorite and why? How often do you finish in-class assignments? How often do you finish homework assignments?

*You as a math student:* Describe your most memorable moment in math and explain why you remember it. Explain how you feel about math this year. What grade do you expect to earn this semester?
